

Getting started with Cubby

This sample document demonstrates the built-in PDF viewer. Open the PDF version from My files without leaving the browser, or edit this text file in the built-in text editor.

Try search

Cubby can find text inside documents, not just file names. Search your home for any of these sample words:

slartibartfast
breeblebrox
orbital-tea

Only the sample PDF contains them â so if search finds a hit, you know full-text search is working.

If you are reading this in Cubby, congratulations: you have successfully avoided the paperwork. For a proper search test, try slartibartfast â a word that exists nowhere else in your files except this sentence.

Share documents

Right-click any file or folder to share with another Cubby user or create a public link.

Sample files

Welcome.md Markdown editor and real-time collaboration
Documents/ PDF and text documents like these
Pictures/ Image viewer with thumbnail previews
Videos/ Video playback in the browser

You can delete these demo files whenever you like.
